

YOU ARE GETTING READY TO EXPERIENCE HTC HIGH-SPEED INTERNET LIKE NEVER BEFORE!

The ZyXEL VMG4825 residential gateway provides the ultimate broadband and home connectivity experience. Please see diagram below to ensure your Wi-Fi connection is installed properly.

Your new router has dual band Wi-Fi. Older devices typically function efficiently on the 2.4 GHz Wi-Fi connection. Newer devices function best on the 5 GHz Wi-Fi.

Step 1: Disconnect all cables and the power cord from your existing modem.

- a. You will reconnect the Ethernet cable to your new modem.
- b. Set the power cord aside.

Step 2: Plug the NEW power cord into the power outlet on your new modem and the nearest electrical outlet.

Step 3: Plug the Ethernet cord into the white Ethernet WAN port on the back of your modem.

Step 4: If you had any computers connected directly to your old modem, reconnect them to the yellow Ethernet ports on your new modem.

Step 5: You may dispose of your old modem, recycle it at the appropriate facility or return it to your nearest HTC location.

Please Note: It may take up to 15 minutes to see your Wi-Fi network name appear. If after 15 minutes your network name does not appear, please reboot and wait an additional 10 minutes to see if your modem will download the updated configurations.

Important: Place the modem in an upright position (as shown above) for best performance.
